

Utility and Telecommunications Construction

WHO WE ARE:

Hunt Communications is a family-owned utility and telecommunications construction company servicing the Dallas-Forth Worth metro and surrounding areas, specializing in fiber optic and coax construction. As your neighbors in this community, we are dedicated to safely and efficiently establishing local cable infrastructure with less disruption to your daily routine, commute, and cable and internet service.

WHAT WE DO:

<p>UNDERGROUND & AERIAL CONSTRUCTION</p>		<p>FIBER & COAX SPLICING</p>		<p>CABLE INSTALLATION</p>		<p>ENGINEERING & DESIGN</p>		<p>ISP & OSP CABLING</p>	
--	--	----------------------------------	--	---------------------------	--	---------------------------------	--	------------------------------	--

At Hunt Communications, we're proud to offer the highest quality utility and telecom construction services.

THE TYPICAL CABLE CONSTRUCTION PROCESS HAPPENS IN FOUR STAGES:

LOCATION

A Hunt Communications construction team will survey the service area with non-invasive locating equipment to identify utility lines, including existing cable piping. All underground utilities will be clearly marked before any fiber optic construction begins to ensure uninterrupted utility service to residents and the safety of our workers. If aerial work will be required, our team will inspect utility poles in the area prior to installation.

INSTALLATION

During this stage, residents will observe trucks, signs, construction equipment, and Hunt Communications construction team members on their street. While any construction process is likely to be disruptive to some extent, Hunt Communications makes it a priority to minimize interruptions to daily life for residents within our construction areas.

CABLING

After pipe installation, the Hunt Communications team will pull fiber optic cables through the pipes. This stage of construction includes placing an above-ground “pedestal” over the cables, which protects the network and acts as a general network interface for the serviced neighborhood.

SPLICING

The final construction phase is splicing, during which a Hunt Communications team will join (or “splice”) together the fiber optic cables to establish the network. Once splicing is complete, our team will bury the cables and restore the surrounding landscape to its pre-construction state.
